

RESEARCH STUDY

TELEMEDICINE FOR HUNTINGTON'S DISEASE

Individuals with Huntington's disease are invited to participate in the study "TeleHD" to determine the feasibility and value of telemedicine visits for HD patients and their care partners.

This is a Research Study (STU00211872) conducted by Dr. Danielle Larson and Dr. Danny Bega at Northwestern University.

Who is Eligible?

- Have a diagnosis of Huntington's Disease
- Ages 18 to 70
- Have a computer, laptop, tablet or phone with a camera, microphone, and internet access
- Fluent in English

What will you be asked to do?

- Complete two telemedicine visits (by camera at home) in addition to your two regular in-person Huntington's Clinic visits over a 6-9 month time period.
- During the visits, a neurologic exam will be performed and you will complete two cognitive tests. The telemedicine visits will likely take less than 30 minutes.
- After each clinic visit, you will be asked to record the time and travel burden of your visit.
- After all of the visits, you will be asked to complete a survey about your satisfaction with telemedicine visits.

With questions or interest contact:

- Call the research coordinator at **312-503-8229** or the Northwestern Research Hotline at **312-503-5645**
- **Email:** robert.jr3@northwestern.edu, the research coordinator

Participants will not be compensated for their participation in this study.
